25X1A

[redacted] Mission C244C [redacted]

was 25X1C

flown over North Korea and Mainland China on 7 November 1964. The mission was planned to update order-of-battle information on North Korea, the Port Arthur area, and the Shantung Peninsula, which had not been sufficiently covered by recent satellite or U-2 photography. The aircraft departed [redacted] for a total flight time of six hours and forty-six minutes. During the three hours and twenty-four minutes over denied territory, fifty-two COMOR targets were overflown. Forecast weather at Go-No-Go time was Cat II (scattered clouds) with patchy Cat III (broken clouds). The pilot reported the weather over the target areas as better than forecast and early indications show the mission route was flown as planned.
